

Rails - Project scaffolding

Visit the official Rails image on the Docker hub

https://hub.docker.com/_/rails/

Pull the official Rails 4.x Docker image

```
docker pull rails:4
```

^ You can easily use Rails 5.x+ or greater on your apps after you finish the course

Verify the Rails image exists

```
docker images
```

Move into the MobyDock project folder

```
cd ~/Projects/MobyDock
```

Generate a new Rails project

```
docker run -it --rm --user "$(id -u):$(id -g)" -v "$PWD":/usr/src/app  
-w /usr/src/app rails rails new --skip-bundle mobydock
```

Move into the generated Rails project named mobydock

```
cd ~/Projects/MobyDock/mobydock
```

Create Docker related files

```
touch Dockerfile docker-compose.yml .dockerignore
```

Remove the Rails Docker image (optional)

```
docker images
```

```
docker rmi <image id of the rails image>
```

^ You'll see 2 images but they have the same ID, so you only need to remove it once
